How To Schedule Your Appointment with Dr. Iyer

We have recently changed our scheduling process, so even if you have been to our office recently, please read carefully so as to not delay your appointment. Please be advised that we cannot schedule an appointment for you until we have the order from the referring physician.

1. When you are ready to schedule your appointment gather the following information to allow us to process your request as quickly as possible:
 - a. Full name of the Patient
 - b. Date of Birth of the Patient
 - c. Referring physician
 - d. Insurance information - type and member ID for Primary and Secondary
 - e. The best phone number and time to reach you. Our call back hours vary, but if you need to be contacted after 3:00PM it may be best to give an email address if possible.
 - f. If you prefer to be contacted via email please spell out your email address slowly and clearly.
 - g. If you have a return appointment with your referring physician please let us know.
2. If you do not plan to schedule, you do not have to call the office. If you just have questions about the test visit our website at NerveMuscleCenter.com. If you would like to give us a courtesy call letting us know you don't plan to schedule or would like to wait to have the test you may do so at your convenience.
3. Call (502) 708-1338, select option 1 and wait for the prompt. Have the information above handy and follow the instructions on the message. Please be sure to speak slowly and clearly.
4. We will call/email you back within 2-3 business days.
5. We recommend calling your referring physicians and letting them know you are scheduled so that they can give you a return appointment.
6. You may ask to be put on the cancellation list to have your appointment moved up when another patient cancels, but be sure to notify your referring your physician if this is the case to find out if they can get you back into their office sooner.

How to Prepare for the Tests

1. Eat normally and take your medications as usual. **If you have an implanted cardiac pacemaker or defibrillator, you must inform our office as soon as possible as we may not be able to perform the test in our office.** Let us know if you are on blood thinners (anticoagulants such as Coumadin), are highly susceptible to infections, bruise easily, have a heart murmur/current heart issue, or if you have a history of hepatitis or AIDS, fainting, seizures, or a latex allergy. We ask that if you have a history of fainting or seizures you bring someone with you. **DO NOT bring children under the age of twelve** with you. This is a small office, we cannot accommodate guests. If you have any mobility issues that may hinder you from getting up on the bed or sitting upright, please let us know before your appointment so we can make accommodations in advance. You will not be sedated for the test.
2. Please make sure the area to be tested is clean. Scrub the body part to be tested to remove any body oils on the day of the test. **DO NOT USE ANY BATH OIL,**

LOTIONS, VASELINE, or CREAMS/BODY BUTTER on the area to be tested 24 hours before your appointment time. If you have any open wounds or sores around the location of the area to be tested, please let the office know ahead of time, as it could keep us from being able to perform the test.

3. If you're being tested on the upper extremities (hands and arms), if possible, please wear a loose, short-sleeved shirt or bring one with you. If you're being tested on the lower extremities (feet and legs) we recommend wearing loose-fitting sweats or shorts. Also, please remove any jewelry or watches on your fingers, wrists, ankles, and toes prior to your appointment.

What to Expect During the Test

First, the physician will take a brief medical history. Describe your symptoms, past illnesses and medications you are currently taking. A brief neurological examination may follow to check muscle strength, sensations and reflexes.

Nerve Conduction Test: Recording electrodes will be taped to your skin. A stimulating electrode is held against your skin, which sends a small electrical charge along the nerve. You may feel a tingle or your muscle may twitch. The recording electrodes will detect the electrical signals as they travel along the nerve. The interval between the stimulation and the response will be recorded to determine how quickly and efficiently signals travel along the nerve. Each test will take just a few minutes, but several nerves may have to be tested depending upon the disorder.

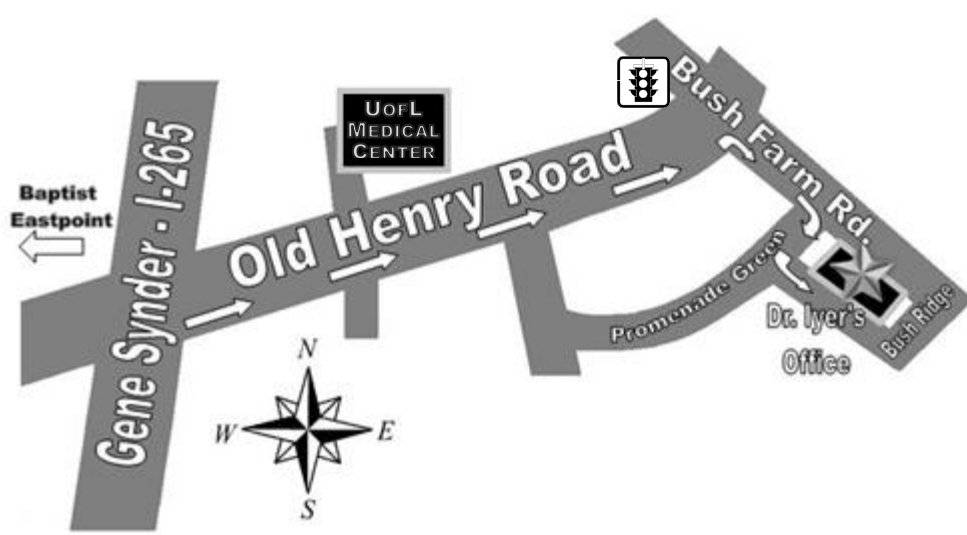

Needle Electromyography: A thin **disposable** needle electrode is inserted into a muscle to record electrical activity, at rest and during effort. The number of muscles examined may vary depending upon your particular condition. There is a slight risk of minor localized bleeding at the site of needle insertion. Transient soreness of the tested muscles may be experienced, which responds to over-the-counter pain relievers.

Test Report

If you are seeing your referring doctor on the same day, a preliminary report will be faxed to the office no less than 2 hours after your appointment. The final report will be sent within 24-48 hours. If the report is to be sent to other physicians, please provide the names and phone/fax numbers on your paperwork and inform the staff while you're in the office. If you have more than 2-3 doctors other than the referring physician who need the report, it is best to just have it sent to your home or through email so you can take it wherever you may need it.

Please note that the tests performed at the Neurodiagnostic Center are to confirm or rule out specific neuromuscular disorders, **but no treatment is provided.** You should consult the referring physician regarding treatment options.
